

Project Manager

New **HFfree™** Battery Anode Material Facility

PERTH, AUSTRALIA

An exciting opportunity exists for a high performing **Project Manager** to join the team at EcoGraf Limited (ASX: EGR) operating within the rapidly expanding clean energy battery minerals sector. Reporting directly to the Managing Director, the Project Manager will be responsible for the successful construction and commissioning of a new state-of-the-art battery anode material facility located in the Kwinana-Rockingham Strategic Industrial Area.

The new facility, which will be the first in the world to be established outside of China, will utilise the Company's proprietary EcoGraf™ **HFfree™** processing technology to manufacture high purity battery graphite for the lithium-ion battery markets in Asia, Europe and North America. It will be constructed in two phases under an EPC construction contract with leading engineering group GR Engineering Services and provide customers with 20,000 tonnes per annum of sustainability produced, high performance battery anode material.

RESPONSIBILITIES

- Finalise detailed engineering design works currently underway with GR Engineering.
- Management of EPC construction contract and responsibility for successful construction and commissioning of the project within budget.
- Lead value engineering and continuous project improvement.
- Ensure compliance in all aspects of the project with responsible social, environmental and governance standards.

EXPERIENCE & QUALIFICATIONS

- Strong project management expertise with experience in successful construction and commissioning of mineral processing projects.
- A background in minerals processing, plant design and construction.
- Proficient in contract management and negotiation with good communication and team leadership skills.
- Ability to apply project management skills with a strong focus on commercial outcomes, budget control and project improvement.
- Appropriate qualifications in engineering, metallurgy, mineral processing and or project management.

BENEFITS

- Perth based.
- Attractive salary package with strong performance incentives.

This is an exciting opportunity to join a successful company with a vertically integrated battery anode material business supporting the global transition to clean energy and e-mobility.

APPLICATIONS

Rowley Pennock from Pennock Executive Recruiting is managing the recruitment process. If you would like to be part of an exciting organisation and possess the skills and experience outlined above, please click [Apply Now](#) and attach your CV and Covering Letter or email careers@ecograf.com.au.

Please note: third party applications will not be considered and only shortlisted candidates will be contacted.

ABOUT ECOGRAF

Founded on a commitment to innovation and sustainability, EcoGraf is building a vertically integrated business to produce high purity graphite for the lithium-ion battery market.

The new state-of-the-art processing facility in Western Australia will manufacture spherical graphite products for export to Asia, Europe and North America using a superior, environmentally responsible purification technology to provide customers with sustainably produced, high performance battery anode graphite. In time the battery graphite production base will be expanded to include additional facilities in Europe and North America to support the global transition to clean, renewable energy in the coming decade.

In addition, the Company's breakthrough recovery of graphite from recycled batteries using its EcoGraf™ process will enable the reduction of battery waste and the use of recycled graphite to lower battery production costs and improve battery lifecycle efficiency.

To complement the battery graphite operations, EcoGraf is also developing the TanzGraphite natural flake graphite business, commencing with the Epanko Graphite Project, which will supply additional feedstock for the spherical graphite processing facilities and provide customers with a long term supply of high quality graphite products for industrial applications such as refractories, recarburisers and lubricants.

EcoGraf, a unique vertically integrated graphite business, positioned for the future of clean energy.

A video fly-through of the new West Australian facility is available online at the following link:
